

Integration with KRONE

Optimize trailer management with real-time KRONE data on Frotcom

Frotcom is now integrated with KRONE Telematics, allowing you to monitor your trailers in real time, without the need for additional hardware.

Your trailers carry valuable goods over long distances, so knowing their exact location and condition is key to ensuring safety, efficiency, and profitability.

With Frotcom's integration with KRONE, all essential trailer data is available at your fingertips, fully integrated into your Frotcom platform.

How we help

Frotcom's integration with KRONE gives you direct access to real-time trailer data helping you optimize trailer operations and boost fleet efficiency.

Once the integration is activated, KRONE trailer data becomes instantly available in Frotcom's interface. You can monitor:

- Real-time position and direction
- Speed and mileage
- Temperature data and setpoints (up to 6 sensors)
- Door status
- Fuel level (where applicable)

By combining KRONE's telematics with Frotcom's intelligent fleet management system, you gain a smart, more efficient way to manage your trailers, helping you reduce costs, improve compliance, and boost operational performance.

Benefits

Centralized fleet management

Access real-time data from both trucks and trailers on the same platform.

Save on installation and maintenance

No need to install extra GPS trackers — data is collected from the existing KRONE telematics system.

Gain full control

Monitor location, temperature, door status, fuel level, and much more, all from within Frotcom.

Improve efficiency and compliance

Use Frotcom's tools, such as alarms, reports, and graphs, to act fast and keep your fleet compliant.

Easy to activate

Simply enable the integration in the KRONE Telematics portal and start seeing your trailer data in Frotcom. No technical hassle, no downtime.

“Our collaboration with Frotcom shows KRONE’s ongoing commitment to helping transport companies work more efficiently. By enabling easy access to trailer data through trusted platforms like Frotcom, we’re giving customers better tools to make fast, informed decisions.”

Maximilian Birle
Head of Telematics & Digital at KRONE

How it works

Frotcom’s integration with KRONE Telematics works seamlessly, using the existing telematics unit already installed in KRONE trailers. No extra devices or installation required.

1. KRONE Telematics Unit

Each KRONE trailer is equipped with a factory-installed telematics unit that collects real-time trailer data (position, temperature, fuel level, door status, etc.).

2. Data transmission to Frotcom

Once the integration is activated via the KRONE Telematics portal, the collected trailer data is securely and automatically transmitted to Frotcom’s data center.

3. Processing and visualization

Frotcom processes the incoming data and presents it in its intuitive interface, where you can monitor trailers in real time, generate reports, configure alarms, and analyze trends.

4. Smart alarms and notifications

Custom alarms can be defined (e.g., temperature thresholds, geofence violations, door openings). When triggered, these alerts are sent to relevant staff and/or drivers via the Driver App or email/SMS.

5. Full control from day one

From the moment the integration is activated, your KRONE trailers become part of your centralized Frotcom fleet management system: with no downtime, no manual setup, and no disruption to your operations.

Main features

- **Map:** View real-time location and movement of trailers
- **Reports:** Generate detailed reports for analysis and compliance
- **Alarms,** including:
 - Temperature thresholds
 - Door openings
 - Speed violations
 - Geofence entry and exit
- **Coupling/Uncoupling:** Track trailer-truck connections
- **Graphs:** Visualize sensor data and trends over time
- **Vehicle > Infobox:** Access detailed asset information in one view
- **Management > Fuel, refuel:** Monitor and manage fuel levels and refueling events
