

Plug & Play vehicle tracking and maintenance

Smart tracking solution for light vehicle management.

Frotcom offers a Plug & Play tracking solution for companies with a fleet of light vehicles, that need to manage their maintenance preventively.

Managing a fleet of light vehicles poses particular challenges to fleet managers, due to very complex electronic systems and variable service intervals.

Frotcom simplifies the process with a GPS tracker capable of reading the standard OBD information as well as proprietary OEM data such as the service intervals and DTC codes, all this in an easy to install Plug & Play device.

How we help

Frotcom's new plug-and-play vehicle tracking and maintenance solution provides instant access to essential fleet data with a simple OBD connection.

Frotcom's Plug & Play solution integrates two powerful OBD devices with its proven fleet management software: the C4OBDv8 from Munic.io and the FMC003 from Teltonika.

The C4OBDv8 is capable of decoding OEM proprietary data and collecting critical diagnostic and maintenance information, including engine temperature, RPMs, fuel level, fuel consumption, mileage and proprietary maintenance intervals (BMW & Mini vehicles).

The FMC003 is also easy to install and starts collecting key vehicle diagnostic data as soon as it is plugged into the vehicle's OBD port, including engine temperature, RPMs, fuel level, fuel consumption, mileage and maintenance intervals.

Offering various tracking frequency options and comprehensive driving behavior monitoring, Frotcom's plug-and-play solution empowers fleets to optimize maintenance, boost operational efficiency, and reduce the likelihood of unexpected repairs.

Benefits

Decreased installation time and set up costs

The installation can be done directly by you, without the intervention of an external technician, without the risk of voiding vehicle's warranty.

Flexibility

Reuse the same device in different vehicles whenever needed.

Plan maintenance ahead

Know the service needs remotely and in anticipation, even for vehicles with variable service intervals, per component.

Be informed on vehicle malfunctions

Remote DTC Reading allows for preventive maintenance before simple malfunctions evolve to unplanned stops.

"Frotcom provided us with a solution where we receive real-time data from our vehicles, allowing us to comply with the manufacturer's maintenance guidelines. We initiated a partnership that meets the requirements we set from the beginning, with a highly professional approach that greatly supports our team and fleet."

Antonis Chrysostomou
Fleet Manager - Exness - Cyprus

How it works

To monitor each vehicle with Frotcom's Plug & Play tracking and maintenance solution, Frotcom uses easy-to-install OBD devices applicable for light vehicles.

Since no installation is required, simply locate the vehicle's OBD2 socket and insert the device until it is securely placed.

The OBD device collects vehicle data and transmits it via 4G LTE (Long Term Evolution) technology to the Frotcom Data Center. Using a web browser or the smartphone app, you can then access Frotcom to track and monitor your vehicle.

Vehicle location, speed, engine speed, engine temperature, Diagnostic Trouble Codes, fuel level and consumption, and mileage can be tracked.

Depending on the device and vehicle compatibility, additional diagnostic and maintenance data may also be available. This gives you a clear view of your fleet's current status.

You can easily move the device from one vehicle to another. Additionally, you can configure Frotcom to send you notifications by email or SMS when the device is removed.

Main features

- Plug & Play OBD dongle
- Fully featured 4G vehicle tracking
- Diagnostic Trouble Codes
- Mileage and fuel consumption monitoring
- Vehicle diagnostic data
- Device removal notifications

Other related features you might be interested in

- Driving behavior analysis
- Fleet Alarms
- Fleet Management Reports
- Route planning and monitoring
- Mobile workforce management
